

Full Spectrum Vitamin K™

The Only Full Spectrum Vitamin K Formula Available*

Research indicates that vitamin K puts calcium where it belongs! **Full Spectrum Vitamin K™** includes all natural commercially available forms of vitamin K, and includes for the very first time, MK-7 (Menaquinone-7), a form of vitamin K2 that has been isolated from the traditional Japanese food Natto, which appears to be much more potent than other forms of vitamin K.*

Full Spectrum Vitamin K™ contains vitamin K1 and two forms of vitamin K2 (MK-4 & MK-7), along with all of the fat-soluble antioxidant vitamins, such as vitamins A, D and E, which work together with vitamin K synergistically. The vitamin E is supplied as gamma- and delta-tocotrienols, which have been suggested to be fifty times stronger in antioxidant capacity than alpha tocopherol.

Advantages of MK-7:

- ***MK-7 is 10 times more absorbable than vitamin K1 because it is not bound to fiber, and much more absorbable than the other form of vitamin K2 (MK-4) because it is more fat soluble.* Only 3-8% of vitamin K1 is absorbed orally.***
- ***MK-7 works outside the liver (extrahepatic) to control calcium deposits in blood vessels and prevent calcium loss from bone, and is supportive to other biochemical pathways with additional therapeutic applications.****
- ***MK-7 has a longer half-life (48 hours compared to 1 to 1.5 hours for other forms of vitamin K).***
- ***MK-7 is derived from a non-animal source and is suitable for vegetarians and vegans.***
- ***Non-GMO manufacturing and ingredients.***
